

<Use-Case: Look details of issues>

- Scope: Issue Management Program
- Level: Search issues with keyword, creator, or state.
- Primary Actor: Admin, PL, Dev, Tester
- Precondition: At least one issue is already created. User is already authenticated.
- Postcondition: System displays the details of issue on the website.

Main Success Scenario

1. Person selects certain issue that he/she wanted to see.
2. System returns the details of the issue.
3. System displays the details of issue on the site.

Alternate Flow

*a. Any time user cancels

1. System reset the state of the state of issue to original state.
