<Use-Case: Searching Issue>

- Scope: Issue Management Program
- Level: Search issues with keyword, creator, or state.
- Primary Actor: PL, dev, tester
- Precondition: Project is already created. PL, dev, tester is identified and authenticated.
- Postcondition: System displays issues that matches with keyword on the site.

Main Success Scenario

1. User enters keyword in the search box, with selecting scope as "title."

2. System searches the issues from DB.

3. System returns the issues that matches with the requirements.

4. System displays issues in board style.

Alternate Flow

1a. User enters keyword in the search box, with selecting scope as "creator."

1b. User selects scope as "state."

3a. If there are no issues that matches with the requirements, return empty list.
