<Use-Case: Create Issue>

- Scope: Issue Management Program
- Primary Actor: PL, dev, tester
- Precondition: Project is already created. Actor is identified and authenticated.
- Postcondition: System saves new issue into DB. System displays the list of issues.

Main Success Scenario

1. Actor clicks "Create issue" button.
2. System displays the form to create issue.
3. Actor fills the form.
4. System receives data that filled by user.
5. System saves the reporter of the issue as the tester that made this issue.
6. System sets issue state as "new."

Extend "Save reporter"

7. System saves the data to DB.
8. System displays the list of whole issues.

Alternate Flow: user cancels filling the form.

1. System ignores all the data that user entered.
